Lumia WP8 Boot Repair

Find it in component placing:

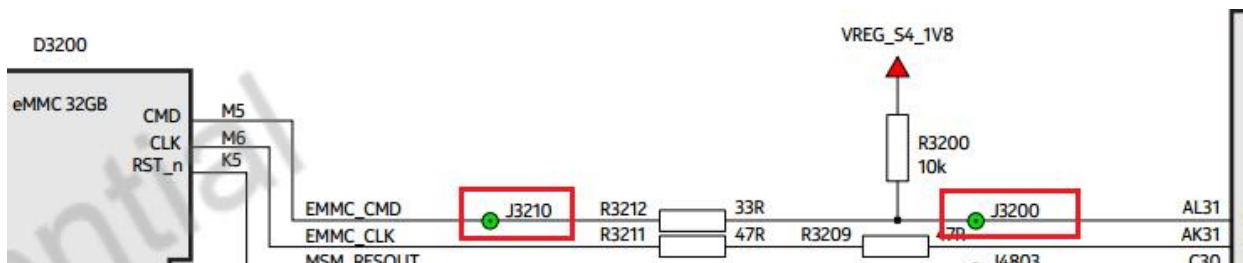

Now you can do following:

- a) Short resistor

**b) Short any EMMC\_CMD line point to ground**

**FYI** : In some models **EMMC\_CMD** can have TestPoint , which can be accessed without removing protection shield. If you find on EMMC\_CMD line any TP – use it, instead of desoldering shield and e.t.c.

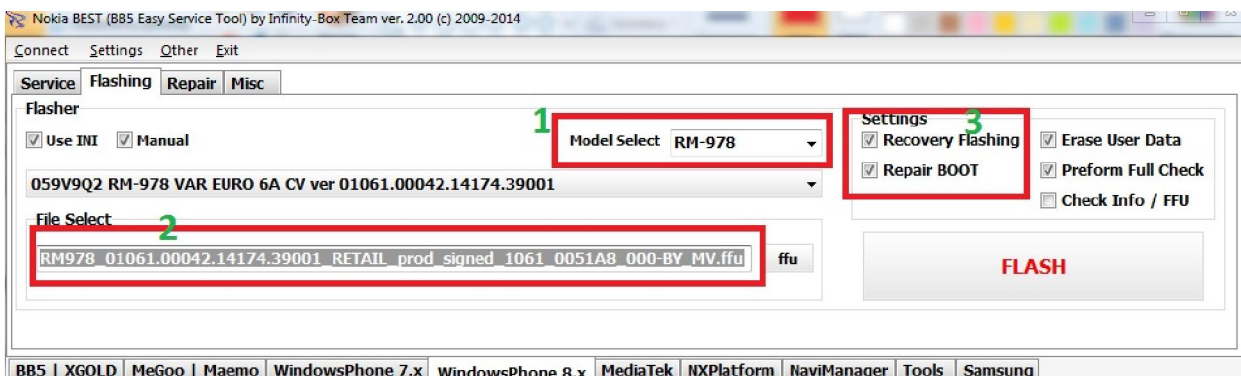

Those points are located at bottom of shield and can be accessed well without removing shield.

- 3. After you short TestPoint – insert USB cable in phone.** PC should detect it in recovery mode. Remove short and connect battery.

## Lumia WP8 Boot Repair

### How repair:

- Run BEST, select correct RM-xxx in model selection:

- Press “Flash” button and connect Phone.

- Wait until process will be finished.

- Device will boot up, when all done

If you face any problem – check cable, battery, correct model selection and then try make procedure again.

## Repair V2 WP8 phones (Lumia 630 and up) :

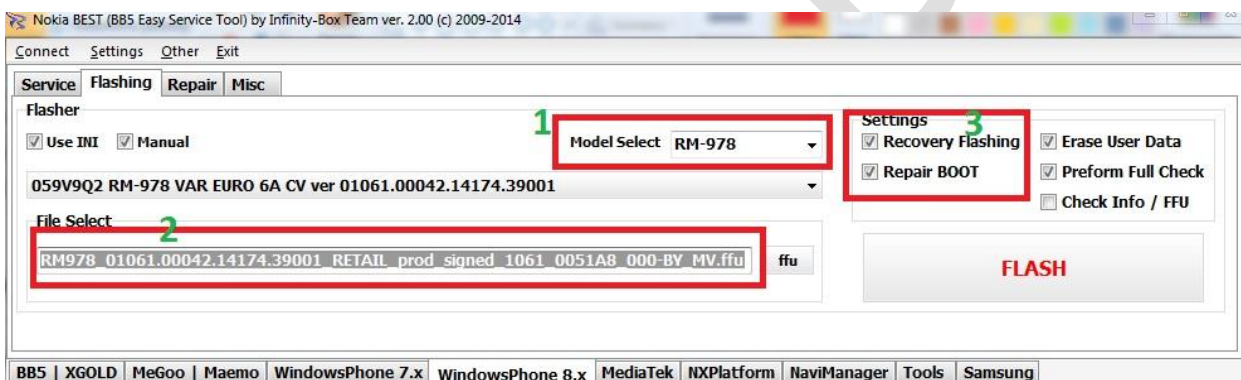

**First Case : Dead Boot** ( PC detect “Zeus Flash” or “Qualcomm HS-USB” or “Nokia Emergency” )

For repair need:

- 5. USB cable
- 6. Charged battery
- 7. Nokia X2 Emergency driver installed ( can be found on support area )
- 8. For WinXp in most case need install driver manually

How repair:

- Run BEST, select correct RM-xxx in model selection:

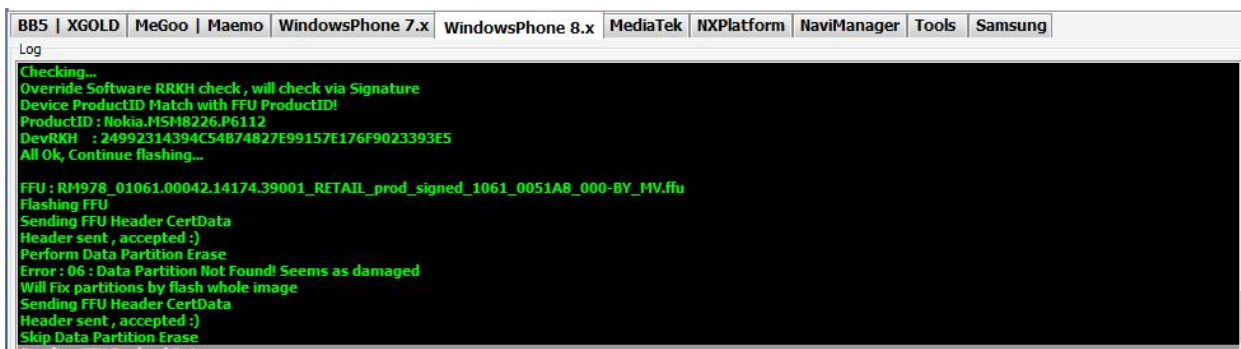

- Press “Flash” button and connect Phone.

## Lumia WP8 Boot Repair

- Wait until process will be finished.
